Ontario and Quebec Regional Turf Spray Program

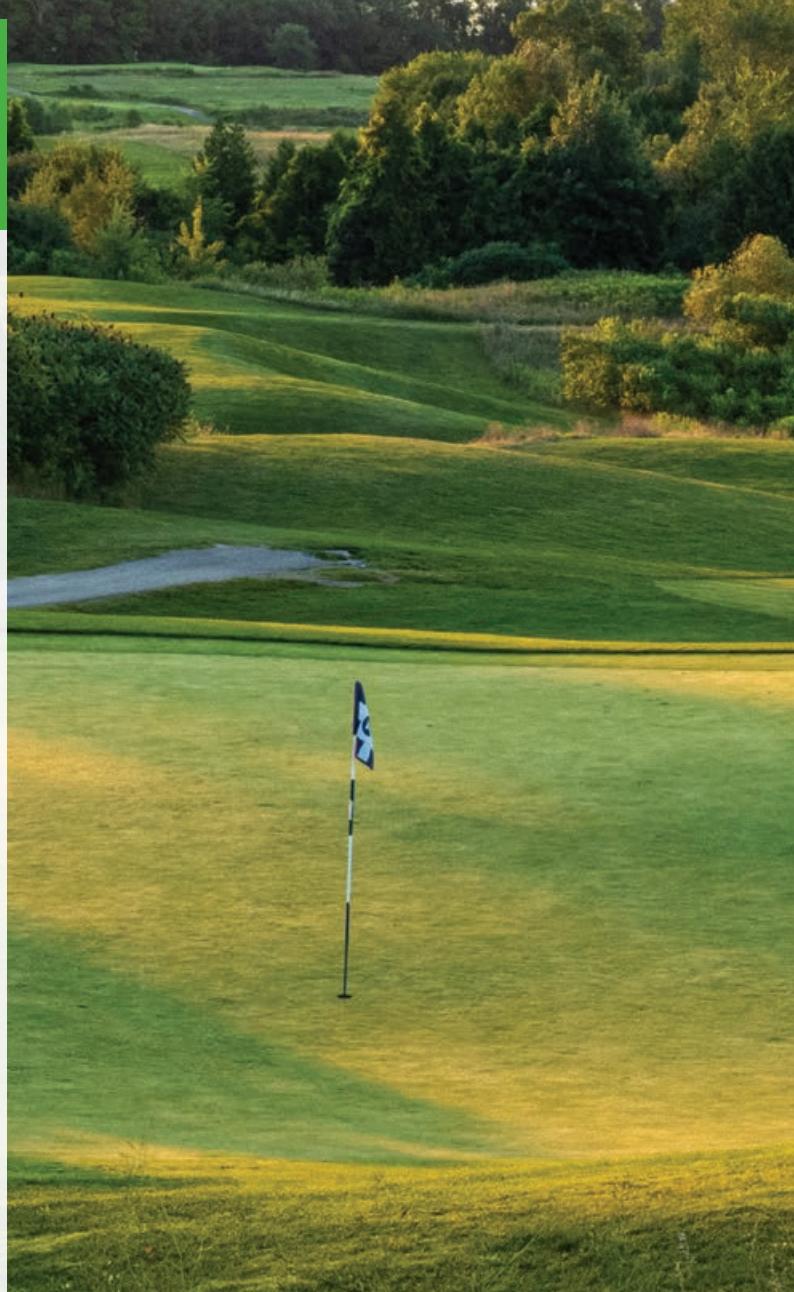

Greens and Fairways – Cool Season

With this geography-specific spray program, superintendents have a customized rotation management plan for disease control. Be sure and include these important rotations in your plan and have strong, resilient turf all year long.

- Intrinsic® brand fungicides provide a strong foundation of **Plant Health Benefits***, including broad-spectrum disease control, stronger roots and higher stress tolerance.
- New Insignia® Pro fungicide combines two trusted active ingredients for long-lasting snow mold control.
- Maxtima® fungicide is a DMI (demethylase inhibitor) that delivers long-lasting disease control of key diseases at any temperature for rotation flexibility and year-round confidence.
- Xzemplar® fungicide is a SDHI (succinate-dehydrogenase inhibitor) that provides ultimate control over dollar spot both curatively and preventatively, combining the fast-stopping power of a contact fungicide with long-lasting preventative action.

* Plant Health Benefits refer to products that contain the active ingredient pyraclostrobin.

Ontario and Quebec Region

Dollar spot typically presents the most significant challenge on tees and fairways, but less so on greens due to the number of product applications and intervals. Patch diseases are major concerns in spring, anthracnose is problematic in summer on pao annua and pythium outbreaks can be challenging in the heat of the summer.

¹Suppression.

Ontario and Quebec Region

Microdochium patch presents a problem in early spring and fall in this climate, but dollar spot is the major challenge on fairways and tees during the growing season. Take care during this time to treat for anthracnose and brown patch as well. Snow mold pressure can be significant throughout much of this region during the winter.
